Lab – 02: Practicing CSS Positions
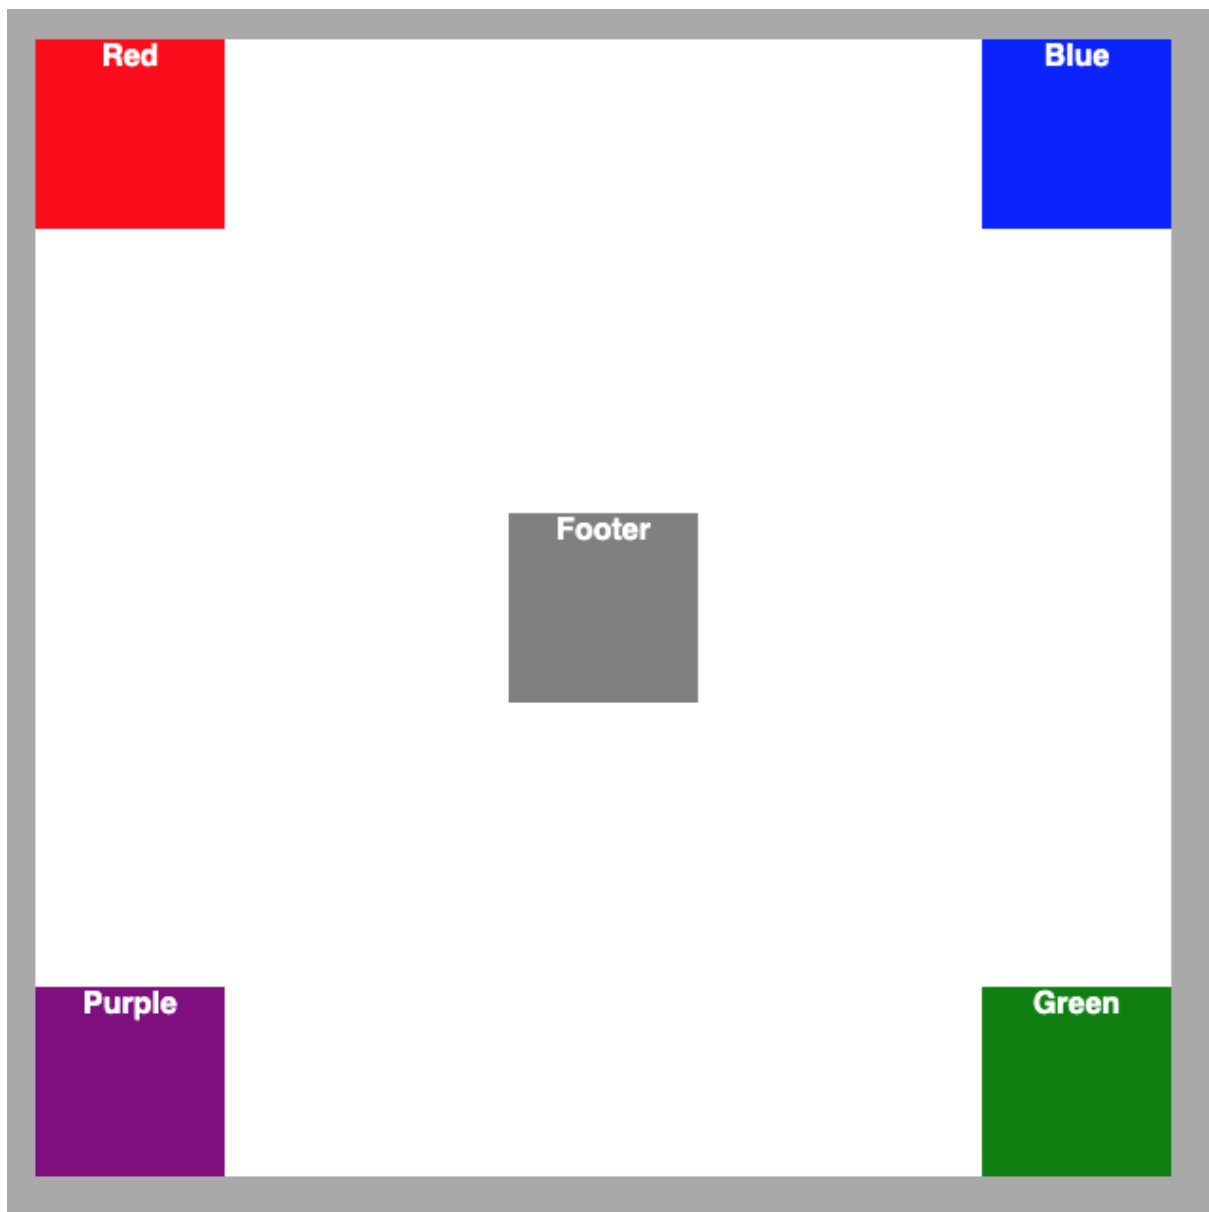

Objective:
- Learning the use of external CSS.
- Practicing how to work with CSS position properties.

Submission:
- Submission of your work must be done on Moodle in a zip file with your name and roll number as follows, "Name-RollNo.zip".
- All of your work should be in a SINGLE file.
- **Email submissions will NOT be accepted.**
- **Plagiarized work will not be marked.**

Task 1: Using CSS position properties, create the following output as shown below:

Task 2: Using CSS Properties display the following output:

- Make each outer box a 4rem by 4rem light gray square.
- Make each inner box a 1rem by 1rem dark gray square.
- Position each outer box to opposite sides of the section.
- Position each inner box to be centered within its outer box. (You might have to do some math.)
- You shouldn't be using any padding or margin for this one!

Task 3: Using CSS Properties display the following output:

- Make all these divs into red squares using width, height, and background.
- Then, combine the n:th-child selector and relative positioning to offset the even divs to the right to make a checkerboard pattern.
